PROFILE

Senior Full-Stack Engineer with 8+ years of experience building and scaling SaaS platforms. As the founding engineer at Persona Studios, I took an AI-powered conversational platform from a CEO's idea to a VC-funded product serving 20+ enterprise clients with 250,000+ monthly interactions — hiring and leading the engineering team along the way. I follow a "Verify then Velocity" approach: ensure the technical plan is sound to eliminate rework, then execute rapidly. Deep expertise across the full stack: React/Next.js, Node.js, PostgreSQL, cloud infrastructure (GCP), and AI integration.

SKILLS

Frontend	React, Next.js (App Router, SSR/ISR), Vue.js, Nuxt.js, Redux/Zustand, Tailwind CSS, Shadcn/UI, Ant Design, Turborepo, TypeScript
Backend	Node.js, Express, NestJS, PostgreSQL, Redis, Prisma ORM, BullMQ, RabbitMQ, RESTful APIs, WebSockets, Event-Driven Architecture
AI / ML	RAG Architecture, LLM Integration (OpenAI, Gemini), Prompt Engineering, Pinecone
Infrastructure	GCP (Cloud Run, Cloud SQL, Cloud Build), Vercel, Docker, CI/CD (GitHub Actions, TeamCity), Nginx
Testing	Jest, Vitest, Cypress, Playwright

WORK EXPERIENCE

Persona Studios — Founding Engineer / Lead Developer

Jul 2023 – Mar 2026

Built from scratch an AI-powered SaaS platform that automates structured business conversations (VC screening, customer support, booking) for 20+ enterprise clients including Antler VC.

- **Architected the entire platform from first commit:** monorepo with Next.js (App Router) dashboards, Node.js/Express API, PostgreSQL, Redis, and BullMQ — deployed on GCP Cloud Run with auto-scaling and zero-downtime releases.
- **Engineered the "Agenda Engine":** a proprietary state machine that forces AI through defined conversation workflows (Collect Data → Verify → Action), ensuring deterministic reliability and eliminating AI hallucination in high-stakes enterprise interactions.
- **Built real-time conversation interfaces** with Firebase for live state synchronization between admin dashboards and customer-facing chat pages. Implemented wildcard custom domain support via a separate Vercel-hosted Next.js application.
- **Grew and led a team of 7** (4 fullstack, 2 AI engineers, 1 QA): owned hiring, onboarding, code reviews, and mentorship. Ran weekly requirement sessions with the CEO, breaking business goals into engineering tasks.
- **Owned the full DevOps lifecycle:** CI/CD pipelines (GitHub Actions), cloud infrastructure, database migrations, monitoring, and release coordination — maintaining a weekly ship cadence with a serverless-first strategy.
- **Re-architected the system** to decouple the core application from the AI processing layer, enabling a dedicated AI team to iterate on model tuning independently while the platform team scaled infrastructure.

Galaxy Education JSC — Full-Stack Developer May 2021 – Jul 2023

Joined as a frontend engineer building high-traffic marketing pages, then transitioned to full-stack development on the Ask Tutor platform.

- **Built the Ask Tutor CMS platform** (Strapi, React, Vite, Ant Design): admin dashboard managing content, Q&A workflows, and 50–100 concurrent online tutors, with RabbitMQ integration for cross-system data synchronization.
- **Led frontend architecture for icantech.vn:** implemented Next.js SSR/ISR strategies that improved Google PageSpeed from 56 to 80+ and reduced initial load times for a high-traffic education portal.
- **Developed a centralized recruitment portal** (Next.js + Strapi), replacing manual HR processes with a structured system for job publishing, candidate tracking, and application management.
- **Delivered responsive production UIs** across multiple internal tools and public-facing pages, translating Figma designs into pixel-perfect code across mobile, tablet, and desktop breakpoints.

Prime Commerce Asia — Frontend Engineer → Lead Frontend Developer Aug 2019 – Mar 2021

Promoted after 1 year to lead a frontend team of 4, building the UI layer for a social commerce ecosystem.

- **Architected a reusable Nuxt.js boilerplate** that served as the foundation for 3 products (Omnichannel CRM, Multi-Platform Distribution, Influencer Marketplace), standardizing architecture and cutting project setup time.
- **Built the Omnichannel CRM Dashboard:** real-time sync of Facebook posts and comments for agencies managing high-volume social campaigns, with tagging, reply management, and escalation workflows.
- **Built the Distribution Dashboard:** unified product, order, and customer management across Shopee, Lazada, and Tiki — enabling sellers to manage inventory and track metrics from a single interface.
- **Established automated quality gates:** CI/CD with TeamCity enforcing 80%+ unit test coverage (Jest) and E2E testing (Cypress) as merge requirements.
- **Bridged Product/Design and Engineering:** translated business requirements into technical specifications and validated UI feasibility before implementation.

FPT Telecom — Full-Stack Developer Jul 2017 – Jul 2019

Internal systems at one of Vietnam's largest telecom providers, processing millions of records monthly.

- **Reduced report generation times from 30s to 3–5s** by optimizing SQL queries and migrating legacy modules from ASP Classic to ASP.NET MVC 5.
- **Engineered a nationwide compensation tool** processing 500K–1M refund records monthly, handling complex financial edge cases across the organization.
- **Managed large-scale data operations** for databases with 3M+ monthly records, collaborating with the Systems team on query optimization and performance tuning.

EDUCATION

VNUHCM — University of Science 2014 – 2019

Bachelor's Degree in Information Technology
